SUMMARY

An enthusiastic and skilled professional with a solid background in coding, solving problems, and thinking creatively. Skilled in using tools like Python, SQL, Power BI, and Snowflake, with experience working with APIs to collect and process data. A fast learner and a dedication to always improving.

EDUCATION

Don Bosco Institute of Technology
Bachelor of Engineering in Computer Science
CGPA: 8.18

Mumbai
Aug 2020 – June 2024

EXPERIENCE

Software Engineering Intern
SequelString AI Private Limited

Mumbai
Feb 2023 – April 2023

- Extracted data from blurry images using Python, OpenCV, and Tesseract, performing image annotations to enhance clarity and ensure accurate data extraction.
- Stored the extracted data in a MySQL database and used SQL for analysis, identifying trends and insights to support decision-making.

TECHNICAL SKILLS

Programming & Development: Python, C++, Django, Flask, Data Structures, OOP.

Data Management & Analysis: DBMS, SQL, MongoDB, Snowflake (Cortex Search, Cortex AI), Data Analysis, Data Visualization, Statistics.

Tools & Technologies: GCP (Containerization, Docker), Power BI, Git, Scrum (Agile Development), SDLC.

PROJECTS

AI DRIVEN MARKET ANALYSIS FOR TRADERS WITH SNOWFLAKE CORTEX.

- Developed an AI assistant that analyzes financial market news, providing traders with sentiment analysis and key insights based on their journal notes to support pre-market trading decisions.
- Integrated NewsAPI for news extraction, processed URLs for efficient content retrieval, and stored the data securely in Snowflake for scalable management.
- Implemented Cortex Search to determine the relevancy of articles based on financial market trends, and relevance for traders.
- Utilized Cortex LLM to generate concise key points and perform sentiment analysis on selected articles, delivering insights for trading strategies.

ENGLISH TO ITALIAN TRANSLATION USING LSTM MECHANISM

- Developed an English to Italian neural machine translation system using encoder-decoder architecture with lstm layers for sequence to sequence modeling.
- Preprocessed data through cleaning, tokenization, padding, and integer mapping, to handle variable-length inputs and outputs.
- Achieved an accuracy of 84.61 with a loss of 0.7808 after 18 epochs of training the model
- Optimized predictions by passing decoder outputs through a dense layer with softmax activation for word-level probabilities.

KAGGLE COMPETITION : BAS 479 F24 MINI 8 SPOTIFY HIT PREDICTION

- Optimized solver hyperparameters and regularization penalties to achieve model convergence with minimal gains from further tuning.
- Implemented and optimized SVM models using various kernel functions, achieving optimal accuracy with RBF kernel at C - 1 and gamma - 0.1.
- Trained and fine-tuned Random Forest models while conducting feature importance analysis to identify key predictors, highlighting feature 8 as the most significant.
- Implemented ensemble methods such as Stacking Classifiers integrated with AdaBoost and Gradient Boosting for enhanced model performance.

LOAN PERFORMANCE MONITORING AND ANALYSIS DASHBOARD USING POWER BI

- Designed and developed interactive dashboards in Power BI, including Summary, Overview, and Details dashboards, to monitor loan performance and assess key financial metrics.
- Implemented DAX queries to calculate advanced metrics such as average DTI, average interest rate for detailed analysis.
- Visualized trends and variations using bar charts, treemaps, and grids to analyze loan performance by purpose, state, and ownership type.
- Optimized data insights by preprocessing and modeling the financial loan dataset, enabling accurate and actionable business decision-making.

ACHIEVEMENTS

Google Cloud Facilitator Program

- Achieved Milestone 1 in the Google Cloud Program as the first facilitator, earning the level badge in Cloud Security. Managed containerization and created Docker images for code templates provided during the program.

Leetcode and Hackerrank

- Established a 5-star rating in C++ proficiency and solved more than 100 DSA problems, showcasing strong coding and problem-solving abilities.

TIJER

- Published a journal paper on the final year B.E. project, focusing on blockchain technology for creating Cryptopunks, a unique digital currency, in the internal research journal with an impact factor of 8.14.

CERTIFICATIONS

Data Analysis Course - Shape AI

- Learned techniques in Excel and Power BI for data visualization and analysis. Gained hands-on experience with Python libraries for data analysis and SQL for database management.

Certified in Agile Scrum

- Learned the foundational principles and values of Agile, including the roles of Scrum Master, Product Owner, and Development Team.
